

GEMINI

Overview

The RGM150 Series is a 150W integrated 2U rackmount power system that incorporates system power, lock power and Mercury controllers.

RGM enclosures provide mounting for two Mercury controllers and multiple Life-Safety Power FlexPower® devices in an access control system capable of controlling four doors as a standalone or multiple doors when interconnected. LSP power modules are provided based on RGM model number and Mercury controllers are provided by the integrator based on the job requirements.

Available options include single (12 or 24V DC) or dual voltage operation (12 and 24V DC), power distribution and control, individual output protection by either fuses or class 2 power limiting, buffered lock control, and remote reporting and test. Each LSP output is protected against electrical surges caused by lightning or transients on the external wiring (SurgeShield™) and each LSP control output is individually selectable for available DC voltages, either failsafe or failsecure operation with fire alarm interface.

Optional network reporting capabilities include: operational fault status; power supply output; battery charging voltage; battery charging current; and fire alarm input status. In addition to automated and scheduled status reports, diagnostic servicing and battery load tests can be performed remotely, saving or reducing the cost of on-site servicing.

The unit is intended for mounting within a standard four post EIA 19 inch electronics rack with a maximum depth of 36 inches.
